

Homework 1: Java Overview, Input, Output, Strings

1. We are encouraged to talk with others about general problems except on exams. In addition, we can't turn in an assignment solution from the previous course even if we have taken this course before. For those individual assignments, we can't record any part of others' solutions. We also cannot accept other's copies or give someone a copy. For the team assignment, we cannot record any part of someone else's solution except our teammates. We also cannot accept their copy or give them a copy.
2. I don't think so. The homework assignments are graded out of 2 points: 1 point for "adequate effort" in preparing the content, and 1 point for style. In conclusion, it won't be graded better.
3. Safety and portability.
4. An algorithm is a sequence of steps that is unambiguous, executable, and terminating.
5. A compile-time error and a run-time error.
6.
 - a. compile-time error
 - b. compile-time error
 - c. run-time error
 - d. run-time error
 - e. When there is a compile-time error, the computer will refuse to translate the program into Java virtual machine instructions. There is no program to run, so I can't test the program for run-time errors.
7.

39 + 3	When we enclose all text strings in quotation marks, the compiler will consider it as plain text.
42	The statement evaluates the expression 39 + 3.
393	Because there is a quotation, 39 will be regarded as plain text. It will be a string.

Additional Questions:

1. API: Application Programming Interface
2. CPU: Central Processing Unit
3. IBM: International Business Machines
4. IDE: Integrated Development Environment
5. JDK: Java Development Kit
6. JVM: Java Virtual Machine
7. GUI: Graphical User Interface
8. LAN: Local Area Network
9. MAC: Media Access Control
10. RSS: Really Simple Syndication
11. UUT: Unit Under Test
12. XML: Extensible Markup Language
