

Unit 1

1. Tires, engines, seats, windows, gas tank, windows. I think seats, windows and so on might be manufactured from scratch at the assembly plant.
2. Table, bed, walls, lights, shelves, and windows.
3. CPU, GPU, RAM, power supply, and fan. I think the fan may be built from scratch by the computer company.

Unit 2

1. It is a process of “ordering from a library”.
2. Primitive types are part of the language itself so we don’t need to use import commands. In addition, Java also provides special syntax for the operation.
3. Primitive types.
4.

```
If (your-age >=0 && your-age <= 3){  
    out.println(“My, just “ + your-age + “ years old!”);  
    out.println(“What a cute little baby.”);  
    } else {  
    out.println(“Thanks for entering your age”);  
    }
```
5. All of them will fulfill the condition and outprint “My, just years old!”
“What a cute little baby”

Unit 3

1. Computer and mobile phone.
2. The second one, sometimes it is hard for people to understand all the details. We always need much relevant knowledge to understand that. It will be more convenient for us to understand how to use it.
3. $W = F * S$ and $V = at$
4. By using the mathematics model, they can simplify the knowledge that may others can't understand so more people can understand this new knowledge and apply it.
5. 13.14.1555
6. because we have no additional restrictions to impose on the value of an am-pm clock

Unit 4

1. To change the time, let the clock stop and let the clock start.
2. It has hour, minute, second, am/pm
3. If use #, it is the input number but when call the method, it maybe changed.
4. `myClock = ( 3, 25, 48, true)`
5. `Void setSeconds ( int newSeconds)`

Set this.seconds to newSeconds.

Parameters:

newSeconds – the new seconds for this

Updates:

this.seconds

Requires:

$0 \leq \text{newSecond} \leq 59$

Ensure:

this.minutes = newMinutes

6. (11, 31, 48, true)

(11, 52, 58, true)

7. (11, 25, 48, true)

8. Boolean, because it is used to check whether it is true.

9. It describes the guarantee provided by the method after it executes.

10. True or false

11. int minutes()

Reports this.minutes

Return:

This.minutes

Ensures:

Minutes = this.minutes

12.int seconds()

Reports this.seconds

Return:

This.seconds

Ensures:

Minutes = this.seconds

13.

Statement	Variable Values
	myClock = (8,2,43,true) yourClock = (11,18,6,false) transferMinutes = 7
transferMinutes = myClock.minutes();	
	myClock = (8.2.43.true) yourClock = (11.18.6.false) transferMinutes = 2
yourClock.setMinutes(transferMinutes);	
	myClock = (8.2.43.true) yourClock = (11.2.6.false) transferMinutes = 2
